ABSTRACT OF THE DISCLOSURE

As an electronic apparatus in which a drive power source for generating a drive force to move a movable portion moving freely can be miniaturized, an multi-function electronic apparatus 1 has a main body 2, an operation and display unit 3 as a movable portion, a drive mechanism 4, the first and second ~~energizing~~pushing units, a guide groove 19 and a slide groove 21. The drive mechanism 4 has a movable arm 15 as a movable portion. The first and second ~~energizing~~pushing units ~~energize~~push the operation and display unit 3 and the movable arm 15. The guide groove 19 and the slide groove 21 change the ~~energizing~~pushing forces of the first and second ~~energizing~~pushing units between the first position and the second position.
